Customer Comes in
1
Views the services from the array
Give the necessary details
6
Receptionist
(Create a token and returns a token)
circular linked list
Token Data Includes:
Customer name,
Customer Address,
Customer NIC,
Service,
Token ID 1
Pointer | Data
Token ID 2
Pointer | Data
Token ID 3
Pointer | Data
7
Receptionist
(Goes through the service counter mangement and assign the token to the counter which has less token)
Counter Data Includes:
Counter Name.
Number of token being serviced by the counter
Counter A
Pointer | Data+> (A,5)
Counter C
Pointer | Data+>(C,10)
Counter B
Pointer | Data => (B,13)
Sorted by the number of token being serviced
Assign the token to One of the Counters
This is one counter
2
Counter
Each counter has a priority queue
(Tokens with high priority goes first and rest FIFO)
Counter Goes through each Token
If the customer of that token available
IF the customer missed the token
3
Counter Moves the token to the Stack of that counter
If the token was issued incorrectly use pop function and remove it from the stack and delete the token
When customer available search it ffrom the list and serve
3
Moves the token to the missed list
(circular Singly linked list)
All the token currently being serviced by each counter is available to monitor by the Manager
All completed token will move to completed service history
4
Manager
Check active tokens of each counter
(Circular linked list)
Counter Data Includes:
Counter Name,
Token numbers which they service
Counter A
Pointer | Data+> (A,3)
Counter C
Pointer | Data+>(C,10)
Counter B
Pointer | Data => (B,13)
5
Service History
(Doubly Linked List)
Token ID 1
Pointer | Data
Token ID 2
Pointer | Data
Token ID 3
Pointer | Data
Token Data Includes:
Customer name,
Customer Address,
Customer NIC,
Service,
